INTERNSHIP TASK ASSIGNMENT

Internship Details:

Applicant Name: Mohd Suhel

Application ID: KTS020260705201

Internship Domain: AI & Machine Learning Internship

Duration: 30 Days

From: 20 July 2026

To: 18 September 2026

ASSIGNED TASKS

"You must complete any 2 tasks from the list below."

Task 1: House Price Prediction System

Description: Develop a machine learning application that predicts residential property prices based on features such as location, area, number of bedrooms, and other property attributes. The application should preprocess the dataset, train a regression model, and provide accurate price predictions.

Key Features

- Data Cleaning & Preprocessing
- Exploratory Data Analysis (EDA)
- Feature Engineering
- Regression Model Development
- Model Performance Evaluation
- Prediction Interface

Deliverables

- Public GitHub Repository
- Source Code
- Jupyter Notebook
- Trained Machine Learning Model
- README Documentation
- Model Evaluation Report

Task 2: Customer Churn Prediction System

Description: Build a machine learning solution that predicts whether a customer is likely to discontinue a service based on customer behavior and historical business data. The system should help businesses improve customer retention.

Key Features

- Data Preprocessing
- Classification Algorithms
- Feature Selection
- Customer Risk Prediction
- Model Evaluation
- Interactive Prediction Interface

Deliverables

- Public GitHub Repository

- Source Code
- Jupyter Notebook
- Trained Machine Learning Model
- README Documentation
- Performance Report

Task 3: Plant Disease Detection System

Description: Develop an AI-powered computer vision application that detects plant diseases from leaf images using deep learning techniques. The application should accurately classify healthy and infected plants.

Key Features

- Image Processing
- Computer Vision
- CNN Model Development
- TensorFlow / PyTorch
- Image Classification
- Prediction Dashboard

Image Processing Computer Vision CNN Model Development TensorFlow / PyTorch Image Classification Prediction Dashboard

- Public GitHub Repository
- Source Code
- Trained Deep Learning Model
- README Documentation
- Performance Report
- Sample Dataset

Task 4: Resume Screening & Candidate Recommendation System

Description: Build an intelligent recruitment system that analyzes resumes, extracts candidate skills, compares them with job descriptions, and recommends the most suitable candidates using Machine Learning and NLP techniques.

Key Features

- Resume Parsing
- Natural Language Processing (NLP)
- Skill Extraction
- Candidate Ranking
- Similarity Analysis
- Recommendation Engine

Deliverables

- Public GitHub Repository
- Source Code
- Working Web Application
- README Documentation
- Project Documentation
- Demo Dataset

Task 5: Capstone Project

Description: Build a production-ready AI & Machine Learning application by applying the concepts learned during the internship. Choose any one of the following real-world projects and develop a complete AI solution with data preprocessing, model training, evaluation, and deployment.

Suggested Projects(Choose any one)

- Disease Prediction System
- Face Recognition Attendance System
- Fake News Detection
- Credit Card Fraud Detection
- Loan Approval Prediction
- Movie Recommendation System
- Traffic Sign Recognition
- Vehicle Price Prediction
- Chatbot using NLP
- Handwritten Digit Recognition
- Emotion Detection System
- Crop Recommendation System

Key Features

- Data Preprocessing
- Feature Engineering
- Machine Learning / Deep Learning
- Model Evaluation
- Interactive User Interface
- Model Deployment
- Documentation

Deliverables

- Public GitHub Repository
- Complete Source Code
- Jupyter Notebook
- Trained AI/ML Model
- README Documentation
- Project Report (PDF)
- Demo Video (3–5 Minutes)
- Live Deployment (Optional)

SUBMISSION GUIDELINES

1. Complete any 2 tasks from the list above.
2. Deploy on Vercel/Netlify and push code to a public GitHub repository.
3. Submit links (GitHub, Live URL, LinkedIn Post) for verification.

Prince Asthana
